

$1 + x + \frac{1}{2!}x^2 + \dots + \frac{1}{n!}x^n + \dots$ 的收敛半径与收敛域

$$R = \lim_{n \rightarrow \infty} \left| \frac{a_n}{a_{n+1}} \right| = \lim_{n \rightarrow \infty} \left| \frac{\frac{1}{n!}}{\frac{1}{(n+1)!}} \right| = \infty$$

收敛域 $(-\infty, \infty)$

$$\sum_{n=0}^{\infty} \frac{(-1)^n x^{2n+1}}{(2n+1)!}$$

$$\lim_{n \rightarrow \infty} \frac{1}{\sqrt[n]{a_{2n+1}}}$$

$\sum_{n=1}^{\infty} \frac{3^n + (-2)^n}{n} (x+1)^n$ 的收敛半径 收敛区间 收敛域

$$\lim_{n \rightarrow \infty} \sqrt[n]{\frac{3^n + (-2)^n}{n}} = 3$$

$$R = \frac{1}{3} \quad \text{收敛区间为 } (-\frac{4}{3}, -\frac{2}{3})$$

$$\text{当 } x = -\frac{4}{3} \text{ 时级数为 } \sum_{n=1}^{\infty} \frac{3^n + (-2)^n}{3^n n} \cdot (-1)^n = \sum_{n=1}^{\infty} \left(\frac{1}{n} (-1)^n + \frac{1}{n} \left(\frac{2}{3}\right)^n \right)$$

两者级数收敛.

$$\text{当 } x = -\frac{2}{3} \text{ 时级数为 } \sum_{n=1}^{\infty} \frac{3^n + (-2)^n}{3^n \cdot n} \quad \text{而} \quad \lim_{n \rightarrow \infty} \frac{\frac{3^n + (-2)^n}{3^n n}}{\frac{1}{n}} = 1.$$

故级数发散.

级数收敛域为 $[-\frac{4}{3}, -\frac{2}{3})$

$$\lim_{x \rightarrow 0} \frac{\sum_{n=0}^{\infty} (-1)^n \frac{1}{2n+1} \cdot x^{2n+1}}{\sin x}$$

取 $n=0$, 分子为 $x + o(x)$

$$\text{原式} = \lim_{x \rightarrow 0} \frac{x + o(x)}{\sin x} = 1$$

$$\lim_{x \rightarrow 0} \frac{\sum_{n=1}^{\infty} \frac{\log \sin^2 n}{n!} x^n}{\sin x}$$

取 $n=1$ 分子为 $(2 \log \sin 1)x$

$$\text{原式} = \lim_{x \rightarrow 0} \frac{(2 \log \sin 1)x + o(x)}{\sin x} = 2 \log \sin 1$$

$$\sum_{n=0}^{\infty} \frac{(-1)^n \cdot n^2}{3^n}$$

$$f(x) = \sum_{n=0}^{\infty} n^2 x^n \quad S = f(-\frac{1}{3})$$

$$f(x) = \sum_{n=0}^{\infty} (n+2)(n+1) x^n - 3 \sum_{n=0}^{\infty} (n+1) x^n + \sum_{n=0}^{\infty} x^n$$

$$\begin{aligned} & \left(\sum_{n=0}^{\infty} x^{n+2} \right)'' & \left(\sum_{n=0}^{\infty} x^{n+1} \right)' & \frac{1}{1-x} \\ & \frac{2}{(1-x)^3} & \frac{1}{(1-x)^2} & \end{aligned}$$

$$\text{代入 } f(-\frac{1}{3}) = \frac{27}{32} - \frac{27}{16} + \frac{3}{4} = -\frac{3}{32}$$
